Profim ACCIS PRO

- Innovative system of independent side-to-side movement of both backrest and seat (SmartHPS)
- Easy adjustment of the basic functions of the mechanism ensuring synchronised tilt of the backrest and seat
- Adjustable armrests, lumbar support and seat extension
- For safety reasons, the gaps between moving parts are no more than 5 mm and where this was not possible special covers were used
- Blue Angel certificate - confirms that our chair is environmentally friendly

Consumption of fabric and leather

The quantities below are only estimated. The real quantity of fabric- or leather-consumption may vary in accordance to the quantity of pieces on order. Please notice that before we accept any order in customer's own material we need to make sample trials. Please be aware that not every type of fabric/leather is suitable for upholstery. Volume of customer's own material must be agreed each time with Profim sales organization

Column A - Estimated consumption of fabric (roll width: 1,40 m)

Column B - Estimated consumption of leather (m²)

Measuring methodology

Swivel armchairs and chairs are measured with a mechanism adjusted in such a way that the seat is as much as it is possible positioned levelly, while the backrest vertically. Swivel armchairs and chairs are measured on their castors, whereas visitor and reception chairs on hard glides. The measurements are approximate and can differ depending on the product configuration.

A - Total height

For products fitted with a gas lift - it is measured with gas lift's minimum and maximum extension. For products fitted with an additional backrest and headrest height adjustment - it is measured in both minimum and maximum positions of the backrest, headrest and gas lift.

B - Seat height

Measured at the highest point of the seat. For products fitted with a gas lift - it is measured with absorber's minimum and maximum extension.

C - Seat height with the burden

Seat measured according to EN standards (with seat burden). For products fitted with a gas lift - it is measured with gas lift's minimum and maximum extension.

D - Backrest height

Measured from the seat to the backrest upper edge. For products with adjustable backrest height - it is measured in the minimum and maximum position.

E - Headrest height

Measured from the backrest upper edge to the headrest upper edge. The headrest adjusted in maximum vertical position in relation to the upper and lower edge of the headrest. Measured in the headrest's minimum and maximum position.

F - Base, frame width

Measured at the uttermost points of the base according to the following figures.

G - Base diameter

Measured according to the figure underneath.

H - Seat width

Measured at the uttermost points of the seat.

I - Backrest width

Measured at the uttermost points of the backrest.

J - Total width

Measured at the uttermost points. For products fitted with adjustable armrests - it is measured with the armrests slid apart to maximum. For products fitted with armrests with adjustable pads - it is measured with the pads slid apart to maximum.

24% rabatt ska dras av på angivna priser

K - Seat depth

Measuring the distance between the uttermost point on the seat and the point it touches the backrest (the contact point is determined with a level positioned vertically to the backrest by projecting the S point from the backrest onto the seat) (1). For some shell chairs, where there is no distinct border-line between the seat and the backrest, the depth is measured on the bend halfway between the seat and the backrest (2). For products with additional adjustable seat depth - it is measured with minimum and maximum slide.

L - Seat (element) length

Measured at the uttermost points of the seat.

M - Total depth

Measured at the uttermost points. Swivel armchairs and chairs are measured according to the drawing underneath. For products with adjustable seat depth - it is measured with minimum and maximum slide.

In models with gas lift with memory.

In models with gas lift without memory.

N - Backrest (element) length

Measured at the uttermost points of the backrest.

O - Armrest height

For swivel armchairs and chairs – it is measured from the seat surface to the armrest upper edge. For armrests with adjustable height – it is measured in the minimum and maximum position. For visitor chairs – it is measured from the floor to the armrest upper edge.

P - Table top length

Measured at the uttermost points of the table top.

R - Table top width

Measured at the uttermost points of the table top.

S - Table frame length

Measured at the uttermost points of the table frame.

T - Table frame width

Measured at the uttermost points of the table frame.

U - Table top thickness

Table top (element) thickness is measured.

PERMABLOK3® is a proven vinyl protective coating that's engineered to create a tough, effective barrier against the three biggest problems encountered in healthcare and hospitality environments – germs, abrasion, and stains. You can't see it or feel it, yet the protection it offers results in extended performance and lasting beauty with a minimum of care.

Certain clothing and accessory dyes (such as those used on denim jeans) may migrate to lighter colors. This phenomenon is increased by humidity and temperature and is irreversible. The producer will not assume responsibility for dye transfer caused by external contaminants and possible permanent staining caused by this phenomenon.
